**Re: Western and Northern Canadian Protocol (WNCP)  
Continuous Submission Review Process for K-12 Mathematics**

The Western and Northern Canadian Protocol is conducting a review of the *WNCP Common Curriculum Framework for K-12 Mathematics*, 1995. This review will produce a revised draft of the Common Curriculum Framework (CCF) for grades K–9 in December 2005. A review of the CCF for grades 10-12 will follow. The partners involved in the WNCP are British Columbia, Alberta, Saskatchewan, Manitoba, Nunavut, Northwest Territories, and Yukon Territory. Alberta will continue as lead jurisdiction for both the curriculum work and the evaluation of learning and teaching resources for mathematics throughout this process.

The Continuous Submission Process has been in place, as a pilot project, for the past few years to continue to identify resources that support the Mathematics CCF. Since the CCF is under revision, the **Continuous Submission Process for mathematics resources is suspended as of June 10, 2004**. The evaluations will be completed for those mathematics resources and/or series and their French translations, which are currently in the review process.

A Call for Resources for K–9 mathematics will be issued in Spring 2006. We recognize the important role publishers, distributors and producers play in providing learning resources to support curricula and the WNCP. Alberta Learning staff will maintain open communications as we proceed with the review.

If you have any questions, please contact the following Alberta Learning staff:

Richard DeMerchant, Program Manager  
Curriculum Branch
