

Publisher Questions to the Western and Northern Canadian Protocol (WNCP) Mathematics Team

Pre-calculus 11

1. Comparing Foundations of Mathematics and Pre-calculus Grade 10, Algebra and Number outcome 2 and Pre-calculus Grade 11, Algebra and Number outcome 2, we have noted some repetition of AIs. Does the WNCP anticipate a different treatment of these AIs at the Grade 11 level and, if so, what differences are anticipated?

WNCP Response:

The AIs for Grade 11 were intended to indicate that students should be able to express radicals with numerical and variable radicands as entire radicals and mixed radicals. Resources should include questions of this type.
